WITH COST ESTIMATES

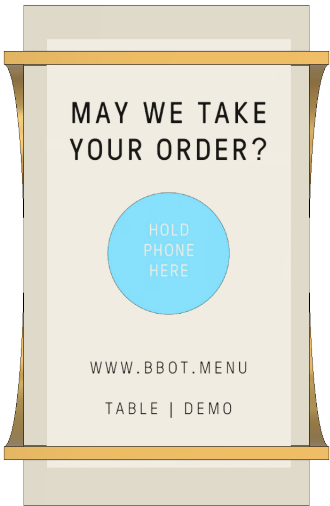

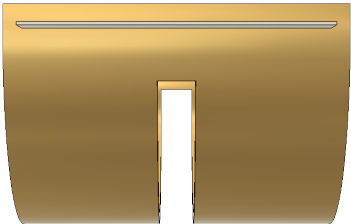

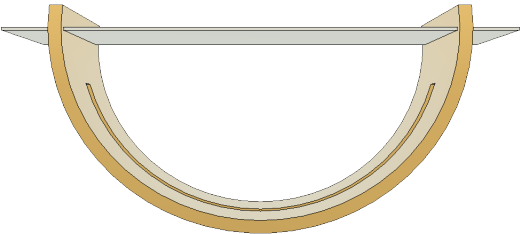

No matter the material, cutting, bending and then finishing is the sequence here.
Acrylic \$5-8 and Brass \$15-25 per unit.

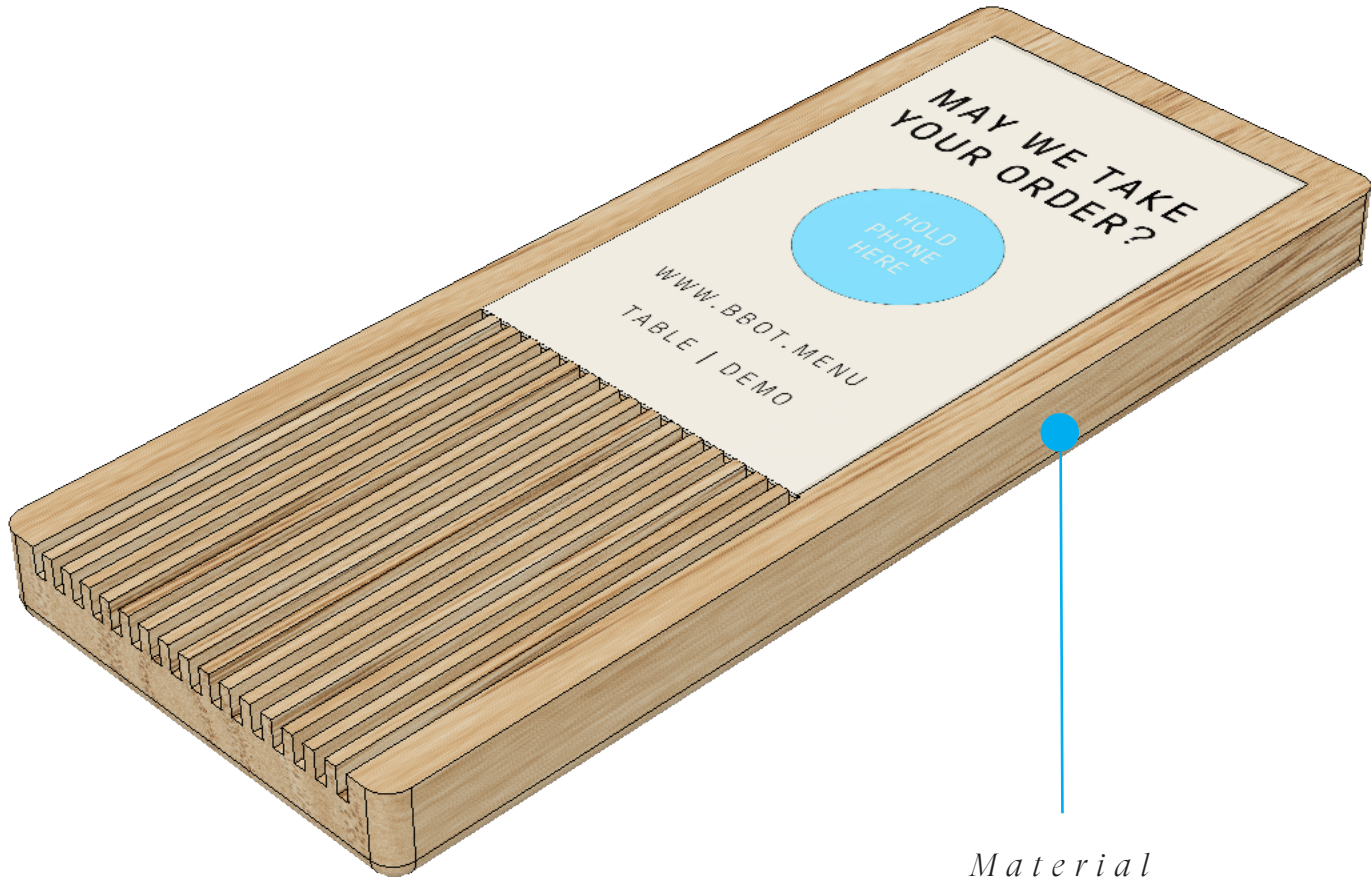

Material
Options

- acrylic
- wood
- metal

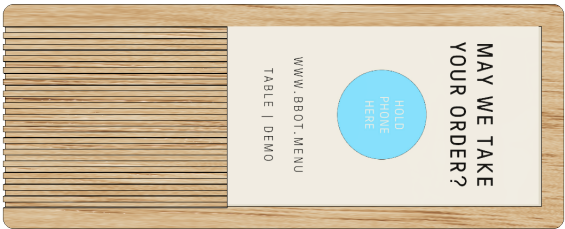

Regardless of wood species these would be cut in a CNC and require some hand finishing.
Expect cost to be \$8-15 per piece, varied by finish and wood.

Material
Options

- wood
- stone
- corian

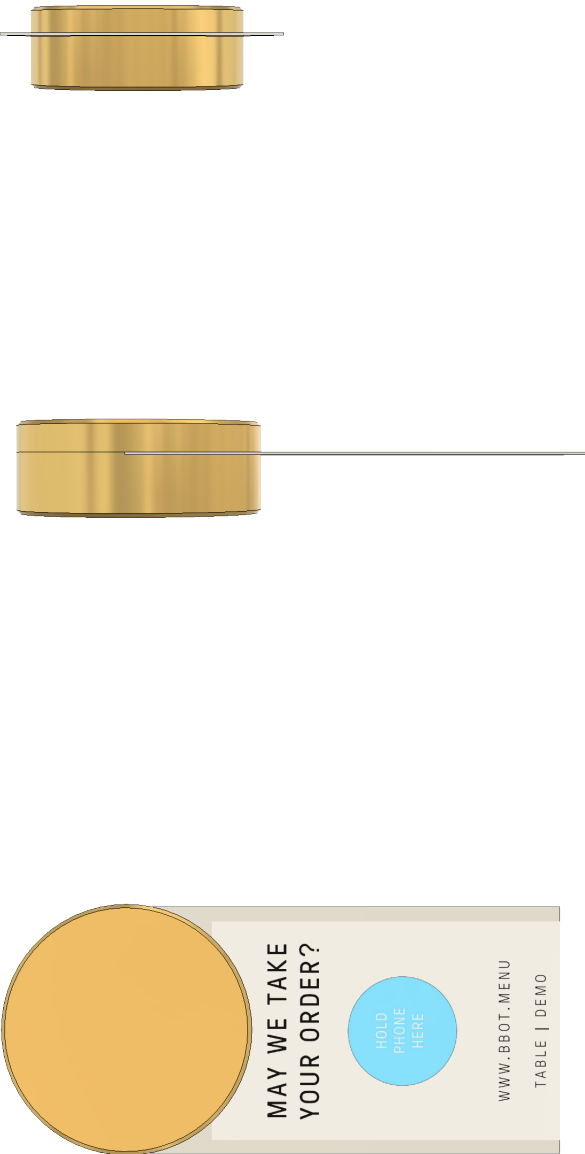

These can either be cast or made from rod stock.
Tough to say cost, but I'd expect anywhere from \$10 - \$20 per unit
Would need to have a few conversations with fabricators.

Material
Options

- acrylic
- wood
- metal
- stone

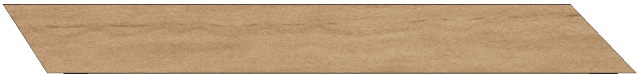

These can all be made on a table saw.
Wood species won't effect price much.
\$3 - \$8 depending on a few factors.

Material
Options

- acrylic
- wood
- stone

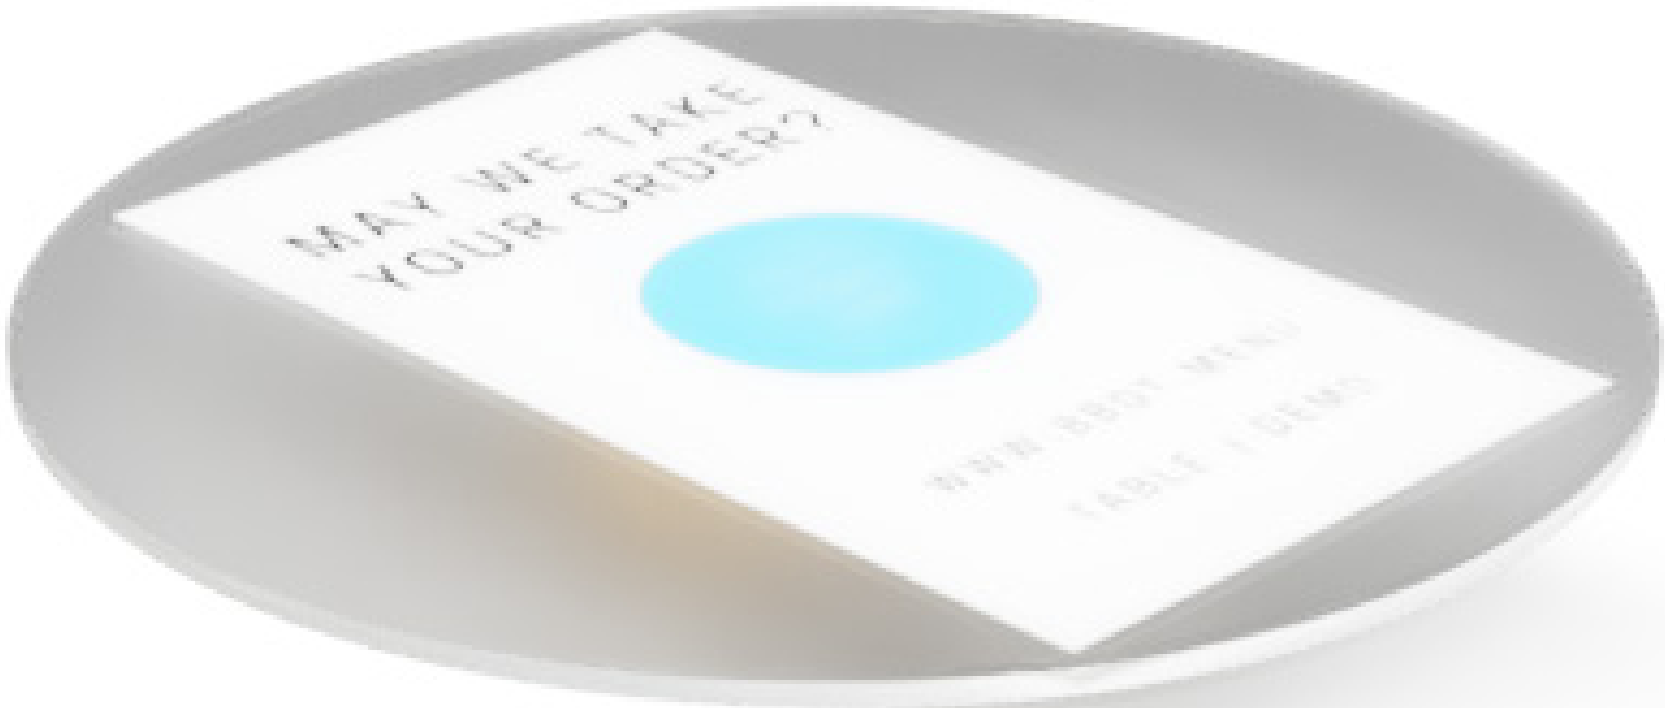

In brass expect these to be around \$10 per unit
For Acrylic, they could be closer to \$4.

Material
Options

- acrylic
- wood
- metal

Depending on the base material, these will be very cost effective.
\$3 - \$5 per unit, but could be even less.

*Sketch Models
for Context*

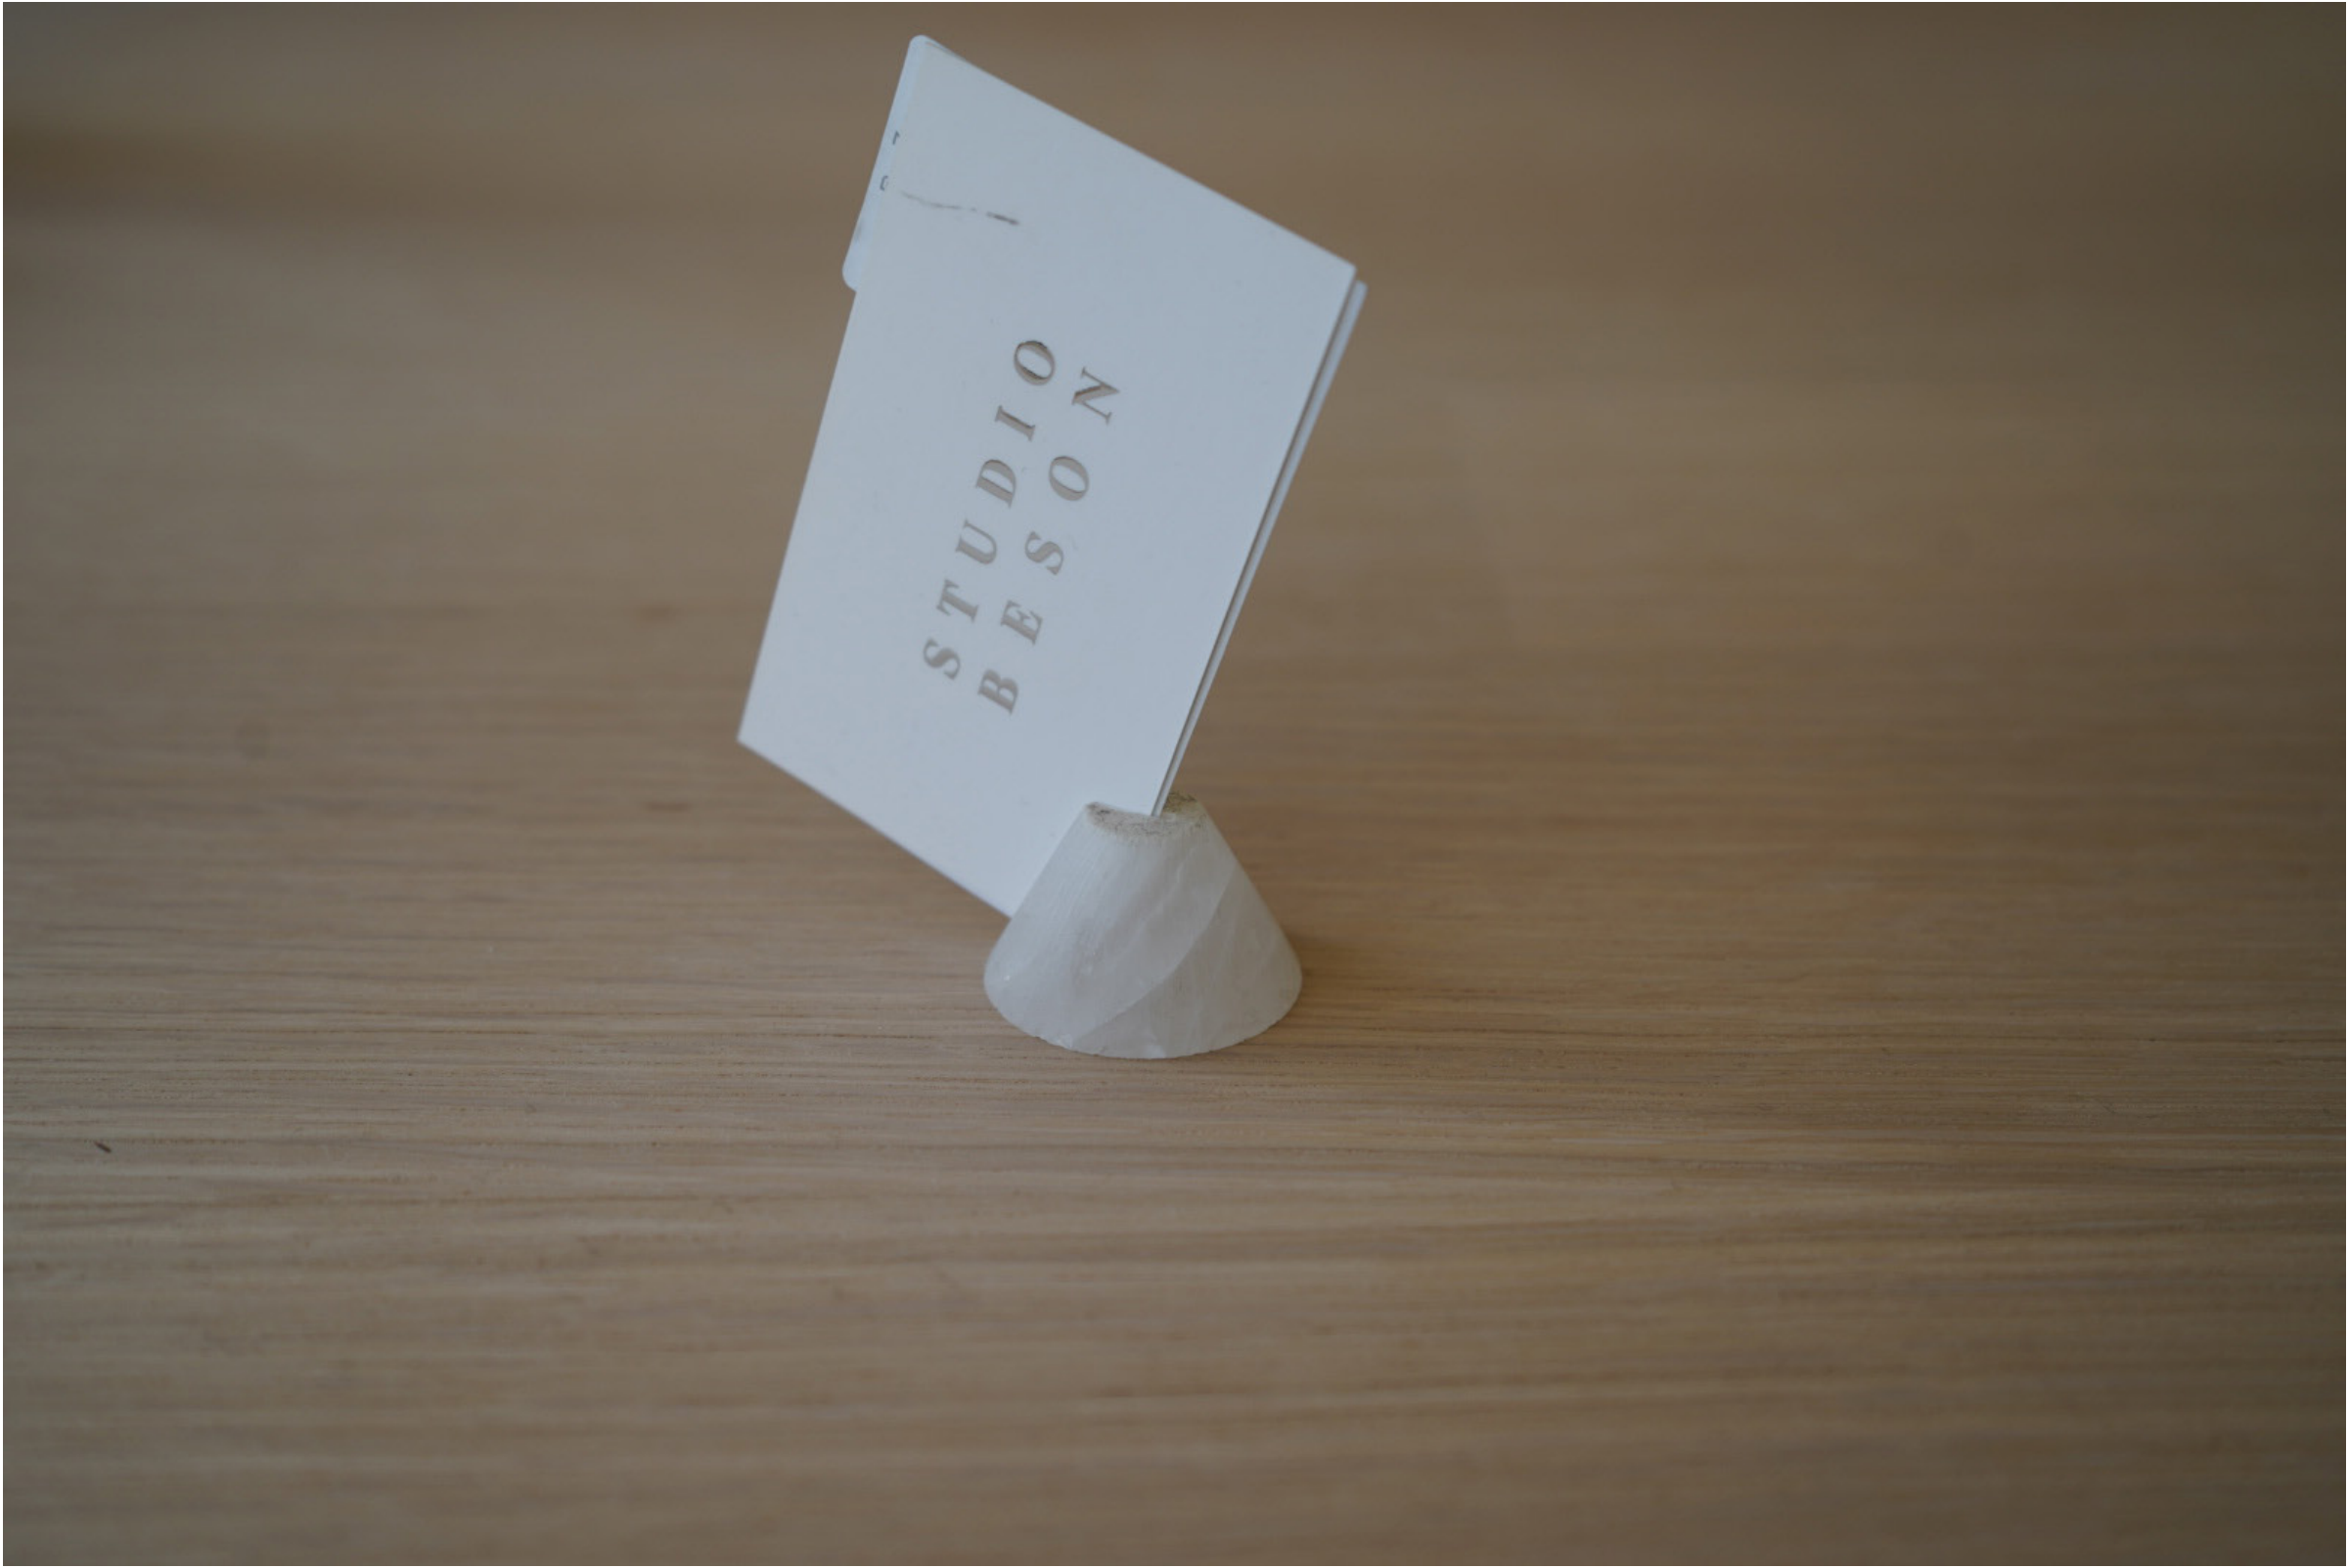

Brass will be around \$18 perunit
Acrylic, closer to \$10

This can be achieved with an off the shelf piece, cut.
They would be under \$5, depending on finish.

These too are off the shelf parts. Could be customized.
\$6 - \$10 per unit.

Again, any wood piece made by hand and easy will be very affordable.
Under \$5 per, depending on finish.

These are off cuts from another stone project but could be custom designed.
\$10 - \$18 per.

The menu is acrylic and wood and so cost will stay down with laser cutting each material.
\$8 - \$12 per unit.

first shapes

BBOT

These will really depend on material. All have CNC or waterjet needs.
I'd guess closer to \$30 per.
